

Filling Instructions

for Glass Disposables

DS0103 & DS0105

Filling Instructions

1. Insert a blunt tipped needle into the space between the airway and the outer wall of the cartridge.

Cartridge must be **upright** when filling the reservoir with 0.3ml or 0.5ml of oil

Do not overfill or allow oil to enter the center way.

2. Immediately after filling, screw on the mouthpiece until it is fully sealed.

Failure to insert the mouthpiece immediately may cause leakage.

Usage

Please wait at least **30 minutes** before using to allow the atomizer to saturate for the best vapor production.

Caution

If overfilled when screwing on the mouthpiece, oil will overflow and drip down into the cartridge. Wipe with alcohol immediately.

If overfilled, cartridges exposed to higher temperatures than during filling, will cause oil in cartridge to expand and leak.

Warranty is void if filling instructions are not followed.
